426.034	Connectivity Center license 1 year	Secure remote access to all network devices of the PV system via OpenVPN. Application: client terminal Period of notice: Expiry after 1 year Automatic extension: No	75,00 €

PURPOSE OF THE CONNECTIVITY CENTER

The purchased license can be installed on a device (a VPN HSPA mobile communications router EBW-H100, for instance). It facilitates the setup and application of secure remote access via OpenVPN to all remote network devices used in a remote network (IP cameras, measuring equipment, inverters, etc.) and does not depend on live access to blue'Log via VCOM.

Certification management is automatically performed in the background.

Please note that a second license for the customer's end device (laptop, tablet) is required for customer VPN access to the router.

TERM

The term of use shall be at least 12 months. The cost of the license shall be billed in advance for the entire 12-month term

TERMINATION

For licenses with an annual automatic extension (recurrent) termination must be submitted to meteocontrol GmbH in writing three months before the 12-month term expires. If a termination is not submitted within this period, the term of this usage agreement shall be extended by an additional 12 months. The package price for an additional 12 months shall again be billed in advance. Terminated licenses shall be deactivated at the end of the term.

After one year, the licenses of articles 426.029 and 426.034 are also deactivated, for which no termination is necessary.

Please note that, under certain circumstances, functions facilitated by the Connectivity Center (for instance, when connecting two parts of a plant via VPN to enable joint plant control) may no longer be available after the agreement expires.
